STEM CELL RESEARCH

The future belongs to those who create it

BIO-GENEX is the stem cell research division of Davion Healthcare. The division is focused on developing, patenting, and licensing stem cell treatments.

Our vision

Stem cell research is leading the medical field closer and closer to creating future treatments and developing cures for a number of diseases including: Parkinson's, Alzheimer's, heart diseases, stroke and diabetes (type 1), birth defects, spinal cord injuries, and the replacement or repair of damaged organs.

Our process

DEVELOPMENT

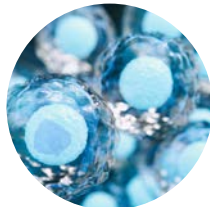

Thorough research and development to identify treatments and cures.

PATENTING

Secure global patents around these research developments.

LICENCING

Licence patents to pharmaceutical companies.

Scientist performing stem cell research for cancer therapy

Creating the future

OUR MISSION

There are extensive potential benefits of stem cell research. These range from development and testing of new drugs to cell-based therapies; in which stem cells are used to replace ailing or destroyed tissue or cells.

However, there are many technical hurdles between the promise of stem cells and the realization of these uses, which will only be overcome by continued intensive stem cell research.

bio-genex[®] is intent on being a leader
in stem cell research and development.
